

The complete package for renewable energy.

- Complete solar system for hot water.
- Dual coil solar hot water tank.
- Flexible flow and return pipes.
- Underfelt sealing collars.
- Safety mixer valves.

What's different about VELUX solar hot water heating?

We've got more than 50 years' experience of roof integration. So we've been able to develop solar collectors that can be fitted easily, quickly and efficiently as they integrate into your roof. They even save you money, as you don't need as much roofing material.

The result is a flush, sleek finish, with the collector looking like a part of the building design, not an 'add-on'.

Solar hot water heating, from VELUX.

Yes, hot water from a window company. Not as odd as it sounds, especially when the hot water is powered by solar collectors that fit into your roof just like windows.

Here's how you can find out more.

To see how simple it is to add a VELUX solar hot water heating system to a new home, just request a brochure by emailing solar@VELUX.co.uk or for enquiries from Ireland, email solar@VELUX.ie

VELUX®

Hot water. New from VELUX.

VELUX®

Solar excellence by design

Everything you need for the whole system.

Unlike other systems, we save you time and effort by providing the solar collectors and the tank, all in one system. It's easier to install, it's WRAS certified, and it's designed to the same high standards you'd expect from VELUX.

Why solar?

Solar is an environmentally friendly, highly efficient source of energy that reduces the output of harmful gases and provides a viable alternative to conventional fuels. And now directives like the Code for Sustainable Homes are making such systems a must-have for new homes.

VELUX solar excellence by design.

Like all our products, our solar hot water system uses our keen sense of design, premium materials and the latest technology. We even use the same kind of flashing kits used on our windows, for perfect roof integration.
